

iKeyer

The intelligent virtual terminal
for automated data entry into
IBM i via the green screen

iKeyer will allow you to free up staff, improve data accuracy and remove manual error through an integrated virtual terminal for all your green screen (5250) input requirements.

iKeyer automates data entry for the green screen through a virtual terminal. Improve processes through teaching keystrokes or use simple scripting.

- Remove manual data input errors
- Speed up data entry processes
- Improve security with full audit trail
- Integrates seamlessly with other solutions from the Utilities 400 enterprise suite
- Process data live or use the automated 'process queue'
- Create processes using simple to use scripting or record sessions and edit
- Automated process allow 24/7 data entry without manual intervention

“

We had hundreds of spreadsheets and text files that needed daily manual input via the green screen. Through the introduction of iKeyer, we've eliminated hours of daily manual data entry while simultaneously improving our data accuracy.

David Ross | IT Manager | Glen Dimplex.

Remove manual data entry by adding an automated virtual terminal.

iKeyer acts as a virtual terminal to pick up data from passed parameters or DB2 files to parse information into the enterprise through a green screen (5250) session. Use a simple to us scripting language to create automated data entry programs or get started quickly by recording an input session then editing the keystrokes within the integrated script editor.

Improve data security with a fully validated process with audit trail

Pick up parsed data and automate data entry

Automate processes
Seamlessly integrate with iRoute

On enterprise license

Increasing productivity and efficiency through automation while simultaneously increasing security and removing manual error through **iRoute's** stable and robust 'tried and tested' technology

iKeyer acts as a virtual terminal to pick up data from passed parameters or DB2 database files to parse information into the enterprise through the green screen (5250 session).

Improve data accuracy. With machine automation, **iKeyer** provides the most secure way of removing time consuming and error prone manual data entry.

iKeyer integrates seamlessly with iRoute for complete data integration with external documents such as XML, XLS, CSV and more. Extract files from FTP / Network / Cloud locations or parse data from an attachment or body of an email or HTML site.

iKeyer works 24/7 every day of the year. It responds immediately to your integration requirement and completing work which manually, may take many minutes or hours to complete, in seconds.

Use a simple to use scripting language to create automated data entry programs or get started quickly by recording an input session then editing the keystrokes within the script editor.

“

The support we've received from Utilities 400 has been outstanding. Their knowledge and expertise in integration is second to none and from the initial trial through to consultancy, the experience has been a joy.

Margaret Geary | IT Manager | ESPO.

Need an extra pair of hands for data entry? **iKeyer** automates processes, never takes a break, refuses holiday and is never off ill. **iKeyer** is the perfect IBM i solution for reliable, secure and fast data entry

Learn about more IBM i solutions from the **Utilities 400** enterprise suite.

Utilities 400 specialise in developing and delivering high quality applications for users of the IBM i platform anywhere in the world.

iKeyer is just one of the many solutions within their enterprise solution suite.
