

ShowMe

Business Intelligence & Portal
Delivery for real-time browser-
based information analysis
without licensing boundaries

“ The introduction of ShowMe has provided the business with ‘one version of the truth’ we now have reliable presentation of information in real time and have enabled secure business portals for our suppliers and customers to review THEIR information. ”

Intelligent Business Intelligence

ShowMe enables the presentation of clean, standardised & real-time information from your IBM i database(s) to allow for better decision making.

- Predict future outcomes through intelligent linkage of data
- Deploy anywhere and anytime using non-restrictive licensing
- Visualise key performance indicators
- Create role/user based dashboards for instant access to key metrics
- Deploy secure portals for customers and suppliers

ShowMe allows for multi dimensional data cubes to be built on the iSeries with 'slice and dice' capabilities. All the necessary enquiries are automatically generated to facilitate the interrogation of the data.

Dashboard and Portal Design is completely flexible. ShowMe includes a sophisticated, drag and drop, web page designer. Hyperlinks to existing web pages can be included and the user can stipulate whether drill-down options are text, image, buttons or data field selection.

The information you need, when you need, where you want and how you want to visualise it.

Role Based

Get to the data you want to see when you want to see it. ShowMe provides role & user based dashboards for immediate access to the information you need. Dashboards can be customised to suit individual, departmental or role requirements.

Your Design

No programming required - design your own dashboards using our browser based and simple to use 'Design Studio' application. 'Drag and Drop' what you need onto the dashboard (including tables, charts, gauges and graphs) and determine how you would like to drill down to various levels of information from the start point and the appertaining security privileges.

Reporting

View the data your way. View data dynamically through your browser and then transfer dynamically to Excel with a press of a button. Summarise data to include total, average, minimum or maximum values.

ShowMe

Dissect information with velocity and without limitation.

Turbo Cube

ShowMe uses Turbo Cube technology, an in-house development that harnesses the power of the IBM i OS.

This technology means that cube rebuilding becomes a thing of the past. Turbo Cube refreshes the cube with new and updated data automatically. This significantly reduces the load on the server plus eliminates the build time therefore allowing you to view your information live.

Slice & Dice

Multi dimensional data cubes are built on the IBM i with 'slice and dice' capabilities. Definitions are populated with data directly from the IBM i database, the data cube or a mix of both – it's your data, your choice.

All the necessary enquiries are automatically generated to facilitate the interrogation of the data. Data manipulation can be completed within the dashboard and can include; field calculation, formatting, sorting, conditional values, data attributes (both fixed and conditional), date formatting, etc.

Turbo Cube

Deploy dashboards and business portals, without license limitations.

Enterprise

Unlike traditional Business Intelligence solutions, ShowMe provides you with one single Enterprise license. This technology (which we call DataDeployer) allows you to deploy your business intelligence dashboards and business/client portals to who you want, when they want and how they want to see it.

DataDeployer

One DataDeployer license per server is all that is required for your business intelligence needs.

Critically, this removes the barriers associated with 'per user' licensing allowing ShowMe to grow without user limitations. As your needs for real-time business information and analytics grow, so will ShowMe.
