

# ShowMe

Business Intelligence &  
Analytics B2B Portal Delivery  
for real-time browser-based  
information analysis without  
licensing boundaries

**ShowMe** provides native IBM i  
and/or cloud based real-time  
Business Intelligence WITHOUT  
concurrent user licensing to  
provide browser based,  
enterprise class analytics

**ShowMe** enables the presentation of clean,  
standardised and real-time information from your  
enterprise systems to allow for better decisions.

- Predict future outcomes through intelligent linkage of data
- Deploy anywhere and anytime using non-restrictive licensing
- Visualise key performance indicators
- Create role/user based dashboards for instant access to key metrics
- Provide secure B2B portals for your customers and suppliers
- OLAP based analysis
- Deploy on your IBM i server or enjoy a cloud based delivery and service

“

The ability to produce an electronic trading hub, with real-time visibility, analysis, alerts and control provides real improvements for our customers supply chain performance. Now, one version of truth can be shared through the supply chain and various bottlenecks can be identified and acted upon together to improve performance and reduce costs

**Paul Connolly | Consultant | TruCommerce.**

**The information you need, when you need, where you want and how you want to visualise it.**

Drive innovation and empower better decision making through native IBM i analytics. Make better decisions faster by bringing real-time information to your users when they need it, where and how they want it –mobile, tablet, PC...

Multiple

Revolutionise the way you see your business, without limits or restrictions. **ShowMe** provides the best Business Intelligence experience available for the IBM i enterprise

Using the latest in internet and browser technologies, **ShowMe** is as fast as a rocket in being able to deliver the data to who they need, be in the office on a PC or in the field by cellular on a smart phone.

**ShowMe** uses TurboCube technology, an in-house development that refreshes the cube with new and updated data automatically, rather than rebuild. This significantly reduces the load on the server plus eliminates the build time.

**ShowMe** provides the best way for your stakeholders to view your data. From multiple graphing options to the ability to pivot, compare, contrast and export results, ShowMe provides the intelligent way to analyse data.

Deployed through a browser, **ShowMe** allows users to view their data on whatever device they'd like. Dashboards can be developed for all form factors, from desktop PC to mobile devices.

Export reports with a touch of a button into Microsoft Excel. Spreadsheets can be automatically formatted so on opening, the data can be presented with pivots, charts, tables and graphs.

Security is built into **ShowMe**. Data views are dependent upon login and the user can only see what they have permissions for. This can be applied at multiple levels, business, customer, department, user and more...

**ShowMe** enjoys its own built-in drag-and-drop design studio that allows you add you own graphics and corporate identity to build your own web pages, portals and dashboards WITHOUT any HTML knowledge.

We don't leave the green screen user in the dark, **ShowMe** allows you to deploy intelligence to users who demand their results be delivered via a 5250 session.

Unlike traditional Business Intelligence solutions, **ShowMe** provides you with one single Enterprise license. Deployed over a browser, this means that ALL stakeholders can view the data they need on a device of choice, when, when and how they want it.

Make better decisions faster by bringing real-time information to your users. **ShowMe** provides LIVE information when needed.

Lower your IT overheads and enjoy improved decision accuracy by employing one version of the truth throughout the enterprise.

Provide better analytics and insight through multi-dimensional intelligence using the integrated **ShowMe** OLAP cube technology.

Enjoy total data discovery by intelligent search parameters. This 'google like' search can be linked to individual data fields, date or item parameters and more...

Utilities 400 have provided the eyes of our business. Without ShowMe, we wouldn't be able to see! Its powerful but easy to use and deploy. The strength of their service and experience in IBM i systems allows us to move ahead with Utilities 400 with confidence. They've helped us maintain our market leading position, increase our flexibility and improved our speed to react

**Rob Bates | Commercial Director | Opella.**

**ShowMe's** rich functionality enables users to perform find what the data they need, where, when and how they want it.

# Learn about more IBM i solutions from the **Utilities 400** enterprise suite.
