

# Modern-i

The out of the box  
modernisation solution for  
the IBM i enterprise

Transform your enterprise in minutes  
using the most advance one-step  
web re-facing modernisation solution  
available for IBM i. **Modern-i** detects  
screen and subfile elements and  
transforms to web component  
automatically.

**Modern-i** is a full scale green screen modernisation solution that generates sophisticated GUI's in minutes.

- Create web based interfaces in minutes
- Modernisation completed out-of-the box
- Active Directory (Single Sign On) compatible
- Enhance GUI through intuitive drag and drop design studio
- Add web elements and plug-ins to further enhance
- Combine multiple green-screens into one browser page
- Thin client data delivery, great for mobile deployment

“

The Modern-i solution allowed us to modernise our green-screen applications with ease. It ran right out-of-the box so we had applications running in the browser immediately. And with the 'drag and drop' design studio, it also provides the flexibility to improve and tailor my application with our corporate identity and additional functionality without coding

**Paul Medforth | IT Manager | Dewhirst Group.**

## Move beyond the green screen

Using the latest, most widely used and universally compatible web technologies, **Modern-i** allows you to deploy web faced GUIs to any device that supports a browser. **Modern-i** will automatically identify and generate calendar controls, drop down menus, convert/replace function keys with buttons, add graphs (from graphable displayed data) and more....

Export reports at a touch of a button

Instantly convert 5250 screens

Advanced security and encryption

One Enterprise License

Browser based deployment

**Modern-i** is a NEW solution that addresses the needs of the modern IBM i enterprise who are looking beyond screen scraping their 5250 applications.

Using the latest in browser technologies, **Modern-i** allows you to deploy GUIs anywhere that supports a browser bringing modern interfaces to multiple devices, quickly.

Modern-I is a true out-of-the-box modernisation solution. On installation, **Modern-i** will take the data stream from your 5250 sessions and convert them for your browser.

**Modern-i** comes with a drag and drop design studio that allows you to tailor your GUIs with your own corporate identity. Add your own graphics, drop down menus, buttons and more – without any HTML knowledge.

**Modern-i** allows users to view their data on whatever device they'd like. Dashboards can be developed for all form factors, from desktop PC to mobile devices.

Export reports with a touch of a button into Microsoft Excel. **Modern-i** provides an automatic conversion of “subfile” screens to data grids with facility to download data lists to Excel.

Security is built into **Modern-i**. Use your one secure sign on for all your applications and advanced filtering means that you’ll only have access to the data you require. **Modern-i** makes use of your Active Directory signatures.

Make GUIs more useful and deliver multiple 5250 green screens into one browser interface. Additional data can be added to any screen, either constants or data from files, for example, put the salesman’s name against code on screen.

Only one single Enterprise license is required for ALL applications developed in **Modern-i** (note, check for ERP licensing restrictions). Deployed over a browser, this means that ALL stakeholders can use the applications they need on a device of choice when needed.

**Modern-i** provides the best of both worlds for both programmers and non-programmers alike. Using the drag-and-drop design studio means ZERO coding required. If you are a coder, you can hook in your programs to the GUI applications. There is no need to have access to, or change the source code.

ShowMe+ uses browser technology to deploy your portal or graphic user interface. No need to install PC Client software, applets or ActiveX controls.

Modern-I is fully compatible with other solutions within the Utilities 400 enterprise suite. Add **ShowMe+** to build your own bespoke applications and remove the need to pay maintenance for software you no longer need.

Using the drag and drop design studio, it took just a couple of hours to create some templates that replicated our corporate identity. In under a day, we've converted our 5250 screens to be running under a browser using our fresh and modern look and feel.

**Stuart Morris | Team Leader | Babcock Group**

While modernisation is instant, **Modern-i** also provides rich functionality to tailor the GUI experience to your business requirements.

# Learn about more IBM i solutions from the **Utilities 400** enterprise suite.

**Utilities 400** specialise in developing and delivering high quality applications for users of the IBM i platform anywhere in the world.

Modern-i is just one of the many solutions within their enterprise solution suite.

For more information on our integration, intelligence and application development solutions, please contact our partner network or Utilities 400 direct.
