

ProActive

Automate business processes
and workflow without
modifying existing core
business systems

ProActive allows you to streamline processes, automate procedures and reduce manual errors through intelligent and native IBM i workflow automation.

ProActive allows users to implement an intelligent approach to workflow automation without modification to the existing system.

- Monitor changes to any field within and IBM i database
- Trigger events depending upon the change that has occurred
- Create an audit log of file change
- Run SQL statements
- Execute programs, passing parameters from the before and after image
- Create multi-tiered workflows activated depending upon value parameter
- Able to be fully integrated with other Utilities 400 portfolio solutions including **iKeyer** and **iRoute**

“

ProActive allowed us to fully leverage the power of our enterprise. We've automated previously manual systems while simultaneously increasing accuracy and throughput.

Workflow Automation for the IBM i Enterprise.

Automating business processes can be completed through electronic receipt, business transactions, field value changes and data entry. **ProActive** can trigger events and events can be conditioned by the changes that have occurred. For example, only trigger event if the customer balance now exceeds the credit limit. Optimise automation per customer, activity and/or user – the choices are almost limitless.

Using the workflow rules engine, **ProFiler** allows you to integrate disparate business processes together. You can launch other programs or procedures depending upon values within different enterprise systems **WITHOUT** manual intervention with parameters and data transferred securely.

Using its integrated rules engine, **ProActive** allows you to apply logic to events that will trigger/launch actions depending upon values and variables. Add multiple rules to build powerful workflow to add intelligence and automation to common and/or complex procedures to streamline processes.

Increasing productivity and efficiency through workflow automation while simultaneously increasing security through **ProActive's** stable and robust 'tried and tested' technology

ProActive will allow you to build in your own business rules to ensure that any input data outside agreed field parameters will not be accepted.

ProActive optimises the efficiency of processes by delivering 'the right work to the right people at the right time'. Its engine automates business processes using stacked logic rules in order to make intelligent decisions.

Automating processes not only improves efficiencies but also removes the potential for input error. In addition, without intervention (unless specified) or delay, tasks get completed immediately with a full audit trail recorded.

ProActive works 24/7 every day of the year. It responds immediately to your automation requirements and completes work which manually, may take many minutes or hours to complete, in seconds.

Learn about more IBM i solutions from the **Utilities 400** enterprise suite.

Utilities 400 specialise in developing and delivering high quality applications for users of the IBM i platform anywhere in the world.

ProActive is just one of the many solutions within their enterprise solution suite.

For more information on our integration, intelligence and application development solutions, please contact our partner network or Utilities 400 direct.
